SIPMI DIRECT INSTRUCTIONS

SIPMI PRINTER COMPANY INC.

GLASSWARE SELECTION

5oz CHAMPAGNE COUPE

The glass selection is the key most important element to SIPMI DIRECT's success.

We strongly urge our clients to use the 5oz CHAMPAGNE COUPE. This is perfect for SIPMI. It is not too big and not too small and the rim diameter is perfectly matched to the SIPMI image diameter.

In most locations this is an extremely cost effective glass to rent.

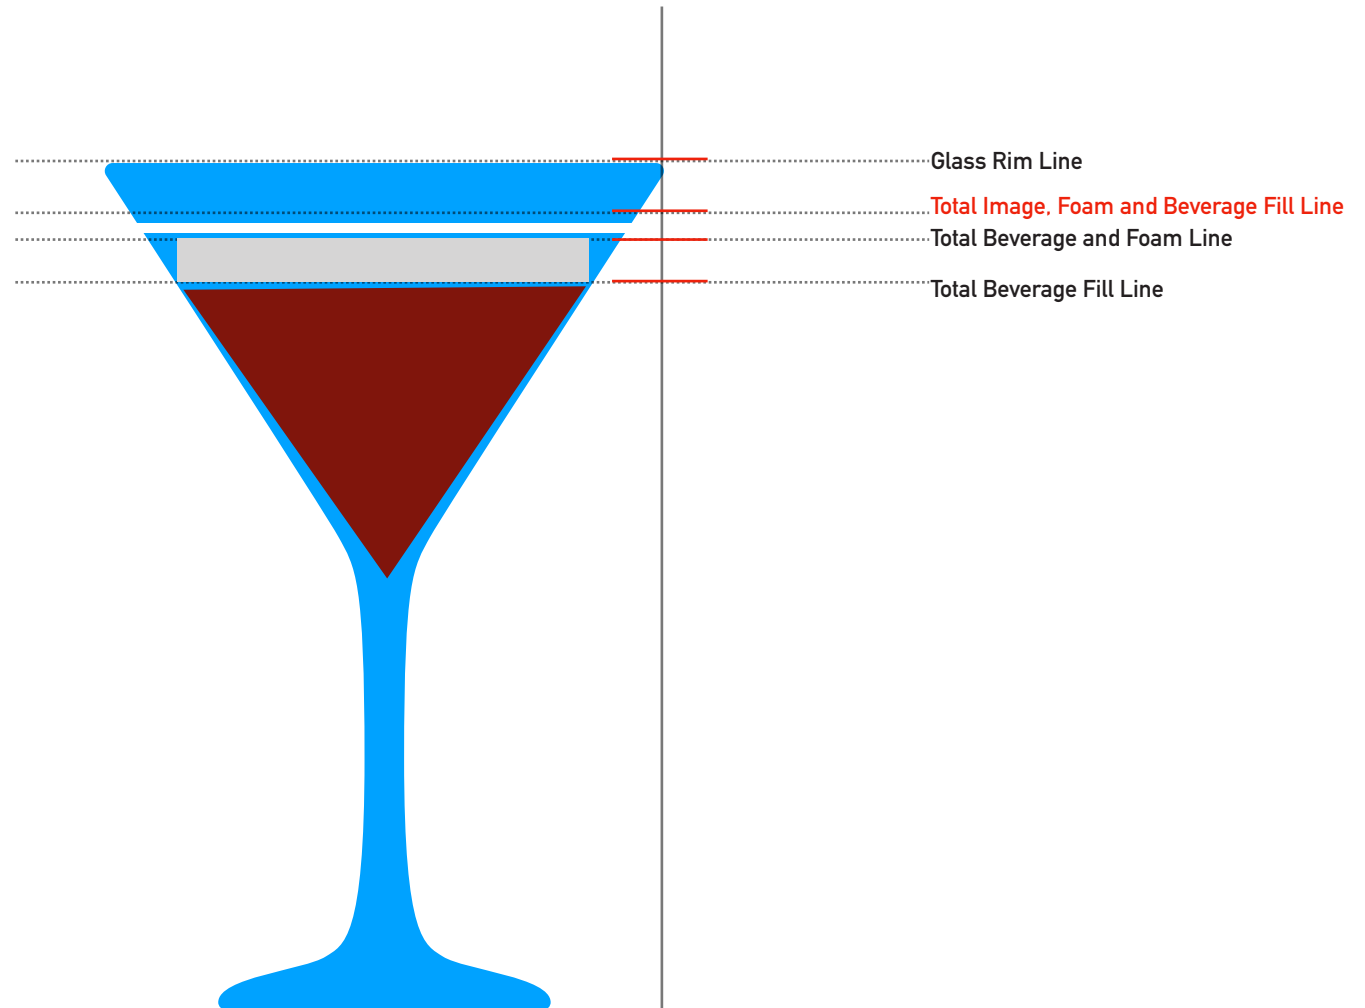

IMPORTANT NOTE: SIPMI PRINTER COMPANY IS NOT RESPONSIBLE FOR YOUR SELECTION OF ANY ALTERNATIVE SIZED GLASSWARE AND CANNOT GUARANTEE SUCCESS IF YOU SELECT ANY OTHER STYLE OF GLASSWARE.

WASH-LINE AND FOAM APPLICATION

In order to ensure the right level of SIPMI Foam, the wash-line of the beverage (the beverage liquid fill line) should be 1/2 an inch from the top rim of the glass.

The SIPMI Foam that is placed onto the top of the beverage should not exceed more than 1/4 inch to ensure that the image is not above the rim line.

SIPMI FOAM CANS

SIPMI FOAM Cans are designed to operate at room temperature and to be used at once.

If for some reason the flow of foam is slowed, shake can well and dip the nozzle into water to clean the nozzle out of sticky foam.

Shake before use and apply a small layer as per directions previously highlighted.

WARNING: DO NOT CHILL SIPMI FOAM CANS EVER!

SIPMI FOAM IS DESIGNED TO WORK BEST AT ROOM TEMPERATURE AND DOES NOT REQUIRE ANY REFRIGERATION EITHER PRIOR DURING OR AFTER USE.

DO - NOT - REFRIGERATE

THE PERFECT SIPMI COCKTAIL
